Section B. Subject Index

4DVAR data assimilation, numerical results from discontinuous nonlinear models, 2791
Abnormal convective activity, mesoscale convective systems during the 1997–98 El Niño, 2443
Adaptive models, multigrid barotropic tropical cyclone track model, 138
Adjoint methods
  numerical results from discontinuous nonlinear models, 2791
  use of adjoint method in forecasting mesoscale convective systems, 1395
Advanced Microwave Sounder Unit, estimates of maximum sustained wind speeds in tropical cyclones, 1518
Advection
  algorithm properties in variational data assimilation, 1221
  objective analysis of ARM IOP data: method and sensitivity, 295
  quadratically conservative high-order advection schemes, 561
Africa, regional model study of synoptic features over West Africa, 1564
Aircraft observations
  airborne radar observations of a warm front during FASTEX, 254

analysis of a rear-inflow jet and deep convergence zone within a supercell, 2270
high-resolution airborne radar observations of mammatus, 159
observations and simulations of a Pacific Northwest warm front, 978
Air quality, evaluation of Eta Model boundary layer for air quality applications, 2761
Air–sea interaction
numerical study of an extreme cold-air outbreak over the Labrador Sea, 47
sensitivity of cyclogenesis to sea surface temperature, 1273
Alpine regions, influence of diabatic heating on a heavy precipitation event, 2822
Anabatic winds, modeling diurnal winds in the Himalayan Kali Gandaki Valley, 1062
Anisotropy, importance of anisotropic error distributions in data assimilation, 766
Annual summaries
1995–99 cloud-to-ground lightning activity in the contiguous United States, 999
summary of Atlantic hurricane season of 1998, 3085
summary of Atlantic hurricane season of 1999, 3057
summary of Atlantic hurricane season of 2000, 3037
summary of North Pacific hurricane season of 2000, 3004
summary of West Pacific, North Indian Ocean, and Southern Hemisphere tropical cyclones of 1997, 3015
Anomalies, objective ranking of synoptic-scale events, 2426
Antarctica
evaluation of turbulent surface flux parameterizations, 26
ocean circulation beneath Antarctic ice shelves, 1905
Aquaplanet, sensitivity of equatorial convection in aquaplanet simulations, 2730
Arakawa Jacobian, computation of a solenoid as a ratio of areas, 345
Arctic oscillation, atmospheric response to early season Eurasian snow cover anomalies, 2746
ARM program, objective analysis of ARM IOP data: method and sensitivity, 295
ARPEGE model, sensitivity of equatorial convection in aquaplanet simulations, 2730
ARPS model, dynamics of northwest summer winds over the Santa Barbara Channel, 1042
Asia
dynamical seasonal predictability of Asian summer monsoon, 2226
modeling diurnal winds in the Himalayan Kali Gandaki Valley, 1062
Australia
modulation of tropical cyclones by MJO, 2970
numerical study of a southeast coastal ridging, 437
Barnes analysis, comparison of integral methods for derivative estimation, 2538
Barotropic models
adaptive multigrid barotropic tropical cyclone track model, 138
ensemble adjustment Kalman filter for data assimilation, 2884
hurricane track prediction with a new barotropic model, 1834
Bayesian methods, ensemble smoother for error estimates, 709
Bistatic radars, simulation of a convective storm initialized with bistatic Doppler radar, 1949
Bogus data, use of bogus vortices with four-dimensional variational data assimilation, 2023
Bombs, explosive cyclogenesis in the North Atlantic, 1481
Bottom topography, application of the GWR method to the tropical Indian Ocean, 470
Boundary layer
development and application of a physical approach to estimating wind gusts, 5
dynamic initialization of the marine boundary layer for short-range NWP, 275
effect of sea spray evaporation on tropical cyclone boundary layer, 2481
evaluation of Eta Model boundary layer for air quality applications, 2761
improved simulation of Florida summer convection, 1441
interaction of the summer coastal jet with California topography, 530
marine application of a moist PBL parameterization in large-scale models, 357
representing entrainment in boundary layer parameterizations of mixing, 1148
supercritical flow within the Cape Blanco–Cape Mendocino terrain complex, 688
z-less turbulence in and above the nocturnal boundary layer, 2136
Brazil
large-scale flow over northeast Brazil, 1673
rainfall variability over southern northeast Brazil, 2614
California
dynamics of northwest summer winds over the Santa Barbara Channel, 1042
interaction of the summer coastal jet with topography, 530
marine atmospheric boundary layer and clouds, 2040
supercritical flow within the Cape Blanco–Cape Mendocino terrain complex, 688
WSR-88D documentation of a supercell with anticyclonic tornadoes, 2805
CAPE
parcel theory in three dimensions and calculation of SCAPE, 1656
sensitivity of simulated supercell structure to environmental profiles, 664
CaPE project, improved simulation of Florida summer convection, 1441
Case studies
cloud-to-ground lightning in linear mesoscale convective systems, 1232
diagnosis of cyclolysis for two extratropical cyclones, 2714
diagnostic and sensitivity studies of a Great Salt Lake–effect snowstorm, 1318
evolution of downslope flow under opposing trade winds in Hawaii, 956
impact of land surface processes on hydrologic cycle: 1993 flood event, 2833
impact of tropical subseasonal SST variability on seasonal mean climate, 853
intense landfalling cold front along the United States northwest coast, 934
mesoscale modeling study of the 1996 Saguenay flood, 1419
multiscale analysis of the 7 Dec 1998 Great Salt Lake–effect snowstorm, 1296
numerical simulation of the genesis of Hurricane Diana (1984), 1859
reexamining the cold conveyer belt, 2205
Rossby wave breaking along the subtropical tropopause, 2555
sensitivity testing of extratropical transitions, 1617
simulation of Typhoon Gladys (1994) and its interaction with Taiwan terrain, 1533
South American cold surges, 1021
Catalina Eddy, dynamics of northwest summer winds over the Santa Barbara Channel, 1042
Categorical forecasts, accuracy and economic value in forecasts of discrete events, 2329
CCOPE project, numerical simulations of a gravity wave event, 909
Central America
summary of Atlantic hurricane season of 1998, 3085
summary of Atlantic hurricane season of 2000, 3037
China, thermodynamic structure of a subtropical quasi-stationary convective line, 1099
Climate variability, atmospheric response to early season Eurasian snow cover anomalies, 2746
Climatology, synoptic climatology of surface cyclolysis in the North Pacific, 748
Clouds, marine atmospheric boundary layer and clouds, 2040
Cloud fraction, prognostic cloud fraction scheme, 1750

Cloud microphysics
comparison of three cloud schemes in winter storm forecasts, 2923
microphysics of the rapid development of heavy convective precipitation, 1882
Cloud motion winds, new cloud motion wind product from Meteosat, 2392
Cloud observations
diurnal cycle in the Tropics, 784
high-resolution airborne radar observations of mammatus, 159
land effect on the diurnal cycle of clouds over the TOGA COARE region, 1500
Cloud parameterizations
comparison of three cloud schemes in winter storm forecasts, 2923
numerical results from discontinuous nonlinear models, 2791
Cloud prediction, effects of trade wind inversion on Hawaiian airflow and cloud distributions, 1117
Cloud-resolving models
interactions between sea breezes and horizontal convective rolls, 2057
modeling convective cloud systems in TOGA COARE, 1689
simulation of a convective storm initialized with bistatic Doppler radar, 1949
Cloud tracking
enhanced automated quality control for high-density satellite-derived winds, 517
impact of satellite winds on experimental GFDL hurricane model forecasts, 835
Cluster analysis, rainfall variability over southern northeast Brazil, 2614
COAMPS
NAVDAS: formulation and diagnostics, 869
observations and simulations of a Pacific Northwest warm front, 978
simulating extratropical transition of tropical cyclones, 1462
supercritical flow within the Cape Blanco–Cape Mendocino terrain complex, 688
COAST project, observations and simulations of a Pacific Northwest warm front, 978
Coastal meteorology
dynamic initialization of the marine boundary layer for short-range NWP, 275
dynamics of northwest summer winds over the Santa Barbara Channel, 1042
interaction of the summer coastal jet with California topography, 530
numerical study of a southeast Australian coastal ridging, 437
structure of offshore flow, 1251
supercritical flow within the Cape Blanco–Cape Mendocino terrain complex, 688
Coastlines, sensitivity of coastally trapped disturbance dynamics to topography, 2955
Cold-air funnel clouds, central Illinois outbreak, 2815
Cold-air surges
numerical study of an extreme cold-air outbreak over the Labrador Sea, 47
South American cold surges, 1021
Cold fronts, intense landfalling cold front along the United States northwest coast, 934
Cold pools
convective outbreak, convective forcing, and cold convective pools, 2157
processes affecting evolution of a cold pool in the Columbia basin, 2600
Colorado, nonclassical frontal gravity wave propagation adjacent to steep topography, 2633
Condensation, impact of horizontal resolution on numerical simulation of a squall line, 2362
Conditional instability, parcel theory in three dimensions and calculation of SCAPE, 1656
Conditional stability, role of surface friction in the tropical intraseasonal oscillation, 896
Conservation equations
quadratically conservative high-order advection schemes, 561
tracer conservation with an explicit free surface method for ocean models, 1081
Conservation of mass
discretization of the continuity equation in semi-Lagrangian models, 1746
exactly conservative semi-Lagrangian scheme on one dimension, 332
Continuity equation, discretization of the continuity equation in semi-Lagrangian models, 1746
Convection
diurnal cycle in the Tropics, 784
improved simulation of Florida summer convection, 1441
sensitivity of equatorial convection in aquaplanet simulations, 2730
Convection lines
convective outbreak, convective forcing, and cold convective pools, 2157
thermodynamic structure of a subtropical quasi-stationary convective line, 1099
Convective clouds, numerical simulation of the diurnal evolution of tropical island convection, 378
Convective parameterization, modeling convective cloud systems in TOGA COARE, 1689
Convective-scale processes, small-scale processes and scale interaction of a mesoscale convective system, 1779
Convective storms
microphysics of the rapid development of heavy convective precipitation, 1882
relationship between precipitation and lightning in the Iberian Peninsula, 2998
sensitivity of simulated supercell structure to environmental profiles, 664
simulation of a convective storm initialized with bistatic Doppler radar, 1949
understanding Hector: dynamics of island thunderstorms, 1550
Convective updrafts, wind structure in a supercell measured by a VHF wind profiler, 1968
Convergence/divergence
analysis of a rear-inflow jet and deep convergence zone within a supercell, 2270
marine atmospheric boundary layer and clouds, 2040
objective analysis of ARM IOP data: method and sensitivity, 295
Convergence zones, rainfall morphology in Florida convergence zones: a numerical study, 177
Conveyer belts, reexamination, 2205
Cool season
intense landfalling cold front along the United States northwest coast, 934
potential vorticity balance on an isentropic surface during winter, 1208
processes affecting evolution of a cold pool in the Columbia basin, 2600
winter thunderstorms in Israel, 1259
Correlation
distance-dependent filtering of background error covariance estimates, 2776
estimation of three-dimensional error covariances, 2126
U.S. tornadoes and Pacific sea surface temperatures, 884
Coupled models
implementation and sensitivity of MM5 coupled with a land surface model, 569
preliminary evaluation of MM5 coupled with an advanced land surface model, 587
seasonal forecasting of tropical storms using coupled GCM integrations, 2521
Covariance
distance-dependent filtering of background error covariance estimates, 2776

estimation of error covariances for wind innovation vectors, 2939
estimation of three-dimensional error covariances, 2126
Cutoff lows, Hurricane Huron: an example of extreme lake-aggregate effect in autumn, 401
Cyclogenesis/cyclolysis
diagnosis of cyclolysis for two extratropical cyclones, 2714
modulation of tropical cyclones by MJO near Australia, 2970
numerical simulation of the genesis of Hurricane Diana (1984), 1859
sensitivity of cyclogenesis to sea surface temperature, 1273
sensitivity of NCEP Regional Spectral Model to domain size and nesting, 2904
surface cyclogenesis and amplification of mesoscale convective vortices, 605
synoptic climatology of surface cyclolysis in the North Pacific, 748
Data assimilation
adaptive sampling with the ensemble transform Kalman filter, 420
advection algorithm properties in variational data assimilation, 1221
coupling neural networks to dynamical systems via variational assimilation, 818
digital filters as a weak constraint in 4DVAR assimilation, 2089
distance-dependent filtering of background error covariance estimates, 2776
dropsonde impact on analysis and 2–3-day forecast for landfalling storms, 1987
ensemble adjustment Kalman filter, 2884
importance of anisotropic error distributions, 766
NAVDAS: formulation and diagnostics, 869
observing system experiment with the West Coast picket fence, 2585
practical method for nonlinear data assimilation, 1578
sequential ensemble Kalman filter for atmospheric data assimilation, 123
simulation of a convective storm initialized with bistatic Doppler radar, 1949
stochastic methods for sequential data assimilation with nonlinear systems, 1194
use of bogus vortices with four-dimensional variational data assimilation, 2023
variance reduced ensemble Kalman filtering, 1718
Data quality control, enhanced automated quality control for high-density satellite-derived winds, 517
Dealiasing, comparing wavenumber truncation and horizontal diffusion in spectral models, 152
Deep convection
modeling convective cloud systems in TOGA COARE, 1689
thermodynamic structure of a subtropical quasi-stationary convective line, 1099
Density coordinates, mixed layer models, 237
Derechos, simulation of a progressive derecho using composite initial conditions, 1593
Diabatic heating, influence on a heavy precipitation event, 2822
Diffusion, comparing wavenumber truncation and horizontal diffusion in spectral models, 152
Digital filters, weak constraint in 4DVAR assimilation, 2089
Diurnal effects
convective outbreak, convective forcing, and cold convective pools, 2157
diurnal cycle in the Tropics, 784
land effect on the diurnal cycle of clouds over the TOGA COARE region, 1500
modeling diurnal winds in the Himalayan Kali Gandaki Valley, 1062
nowcasting tropical island convective storm evolution, 1637
numerical simulation of the diurnal evolution of tropical island convection, 378
Doppler radar, wind structure in a supercell measured by a VHF wind profiler, 1968
Downslope winds
evolution of downslope flow under opposing trade winds in Hawaii, 956
simulation of the Hawaiian nocturnal flow regime, 1135
Dropsondes, impact on analysis and 2–3-day forecast for landfalling Pacific storms, 1987
Drylines, case study of severe storm development, 2183
Dynamics
modulation of tropical cyclones by MJO near Australia, 2970
sensitivity of coastally trapped disturbance dynamics to topography, 2955
understanding Hector: dynamics of island thunderstorms, 1550
ECMWF
explosive cyclogenesis in the North Atlantic, 1481
seasonal forecasting of tropical storms using coupled GCM integrations, 2521
Southern Hemisphere skill compared for two medium-range operational models, 2377
tropical cyclone environments over the North Pacific, 1928
ECMWF models
QPF over the United States by the ECMWF ensemble prediction system, 638
synoptic-scale processes and scale interactions of a mesoscale convective system, 1757
Economic value, categorical and probabilistic forecasts of discrete events, 2329
El Niño, mesoscale convective systems 1997–98, 2443
Elongated convective systems, mesoscale convective systems during the 1997–98 El Niño, 2443
Empirical orthogonal functions
dynamical seasonal predictability of Asian summer monsoon, 2226
using a Lanczos eigensolver in computing empirical orthogonal functions, 1243
Ensembles
ability of a poor man's ensemble to predict precipitation, 2461
adaptive sampling with the ensemble transform Kalman filter, 420
adjustment Kalman filter for data assimilation, 2884
evaluation of a short-range multimodel ensemble system, 729
interpretation of rank histograms for verifying ensemble forecasts, 550
objective verification of the SAMEX '98 ensemble forecasts, 73
QPF over the United States by the ECMWF ensemble prediction system, 638
sequential ensemble Kalman filter for atmospheric data assimilation, 123
smoother for error estimates, 709
stochastic methods for sequential data assimilation with nonlinear systems, 1194
use of adjoint method in forecasting mesoscale convective systems, 1395
variance reduced ensemble Kalman filtering, 1718
Ensemble forecasting, multianalysis–multimodel superensemble forecasts of precipitation, 2861
ENSO
correlation of U.S. tornadoes and Pacific sea surface temperatures, 884
sensitivity of a GCM to low-level clouds over tropical landmasses and ocean, 2103
synoptic climatology of surface cyclolysis in the North Pacific, 748
Entrainment, representing entrainment in boundary layer parameterizations of mixing, 1148
Error analysis
distance-dependent filtering of background error covariance estimates, 2776
estimation of error covariances for wind innovation vectors, 2939
estimation of three-dimensional error covariances, 2126
expected and actual errors of linear inverse models, 1740
importance of anisotropic error distributions in data assimilation, 766

Eta Model
alternative approach to nonhydrostatic modeling, 1164
case study of severe storm development, 2183
evaluation of a short-range multimodel ensemble system, 729
evaluation of Eta Model boundary layer for air quality applications, 2761
impact of land surface processes on hydrologic cycle: 1993 flood event, 2833
Europe
influence of diabatic heating on a heavy precipitation event, 2822
relationship between precipitation and lightning in the Iberian Peninsula, 2998
Evaluation
expected and actual errors of linear inverse models, 1740
preliminary evaluation of MM5 coupled with an advanced land surface model, 587
QPF over the United States by the ECMWF ensemble prediction system, 638
short-range multimodel ensemble system, 729
Evaporation, effect of sea spray evaporation on a tropical cyclone boundary layer, 2481
Explosive cyclogenesis
development and application of a physical approach to estimating wind gusts, 5
diagnosis of an extratropical cyclone with a trough merger, 2310
explosive cyclogenesis in the North Atlantic Ocean, 1481
mesoscale modeling study of the 1996 Saguenay flood, 1419
Extratropical cyclones
diagnosis of an extratropical cyclone with a trough merger, 2310
diagnosis of cyclolysis for two extratropical cyclones, 2714
explosive cyclogenesis in the North Atlantic, 1481
Hurricane Huron: an example of extreme lake-aggregate effect in autumn, 401
reexamining the cold conveyer belt, 2205
synoptic climatology of surface cyclolysis in the North Pacific, 748
use of satellite and ground-based lightning measurements in forecasting, 1809
Extratropical transitions
sensitivity testing of extratropical transitions case study, 1617
simulating extratropical transition of tropical cyclones, 1462
Extreme events, analysis of the 1998 ice storm, 2983
Eyewalls, unbalanced dynamics in a numerical study of Hurricane Andrew, 92
FASTEX project
airborne radar observations of a warm front during FASTEX, 254
sensitivity of cyclogenesis to sea surface temperature, 1273
Finite differences, quadratically conservative high-order advection schemes, 561
Flood events
impact of land surface processes on hydrologic cycle: 1993 flood event, 2833
mesoscale modeling study of the 1996 Saguenay flood, 1419
summary of Atlantic hurricane season of 1999, 3057
Florida
improved simulation of Florida summer convection, 1441
rainfall morphology in Florida convergence zones: a numerical study, 177
use of satellite and ground-based lightning measurements in forecasting, 1809
Forced convection, nowcasting tropical island convective storm evolution, 1637
Forecast error, Northern Hemisphere sensitivity from 1996 to 2000, 2145
Forecasting
comparison of three cloud schemes in winter storm forecasts, 2923
estimation of error covariances for wind innovation vectors, 2939
hurricane maximum intensity: past and present, 1704
Northern Hemisphere 2-day forecast error sensitivity, 1996–2000, 2145
use of adjoint method in forecasting mesoscale convective systems, 1395
Forecast verification
expected and actual errors of linear inverse models, 1740
interpretation of rank histograms for verifying ensemble forecasts, 550
objective verification of the SAMEX '98 ensemble forecasts, 73
Fourier analysis, monitoring and prediction of modes of coherent tropical variability, 2677
Free surface methods, tracer conservation with an explicit free surface method for ocean models, 1081
Freezing precipitation, analysis of the 1998 ice storm, 2983
Friction, role of surface friction in the tropical intraseasonal oscillation, 896
Fritsch–Chappell convection scheme, numerical study of a mesoscale convective system during TOGA COARE, 2501
Fronts, surface
airborne radar observations of a warm front during FASTEX, 254
nonclassical frontal gravity wave propagation adjacent to steep topography, 2633
Fronts, upper-air, airborne radar observations of a warm front during FASTEX, 254
General circulation models
sensitivity of a GCM to low-level clouds over tropical landmasses and ocean, 2103
sensitivity of equatorial convection in aquaplanet simulations, 2730
variable-resolution stretched-grid GCM for regional climate simulation, 453
Geopotential, temperature and geopotential structure from profiler and rawinsonde winds, 1729
GFDL, simulation of Typhoon Gladys (1994) and its interaction with Taiwan terrain, 1533
Global models, spectral viscosity for shallow water equations in spherical geometry, 2346
GMS, synoptic-scale processes and scale interactions of a mesoscale convective system, 1757
GOES, impact of satellite winds on experimental GFDL hurricane model forecasts, 835
Gradient wind, unbalanced dynamics in a numerical study of Hurricane Andrew, 92
Gravity waves
finescale structure of a mesoscale gravity wave, 218
nonclassical frontal gravity wave propagation adjacent to steep topography, 2633
numerical simulations of a gravity wave event over CCOPE, 909
origin and evolution of a mesoscale gravity wave, 198
Gravity wave retardation, application of the GWR method to the tropical Indian Ocean, 470
Great Lakes, Hurricane Huron: an example of extreme lake-aggregate effect in autumn, 401
Great Salt Lake
diagnostic and sensitivity studies of a Great Salt Lake–effect snowstorm, 1318
multiscale analysis of the 7 Dec 1998 Great Salt Lake–effect snowstorm, 1296
Greenland, mesoscale modeling of katabatic winds with MM5, 2290
Grid systems
simulation of tropical cyclones with a movable mesh model, 1370
variable-resolution stretched-grid GCM for regional climate simulation, 453
Hail, microphysics of the rapid development of heavy convective precipitation, 1882
HaRP
effects of trade wind inversion on Hawaii airflow and cloud distributions, 1117

evolution of downslope flow under opposing trade winds in Hawaii, 956
simulation of the Hawaiian nocturnal flow regime, 1135
Hawaii, effects of trade wind inversion on Hawaiian airflow and cloud distributions, 1117
Hector
numerical simulation of the diurnal evolution of tropical island convection, 378
understanding Hector: dynamics of island thunderstorms, 1550
High-frequency waves, multigrid method and flexible hybrid coordinate in a nonhydrostatic model, 2660
Horizontal convective rolls, interactions between sea breezes and horizontal convective rolls, 2057
Hydrology
implementation and sensitivity of MM5 coupled with a land surface model, 569
preliminary evaluation of MM5 coupled with an advanced land surface model, 587
Hydrometeor fall speed, wind structure in a supercell measured by a VHF wind profiler, 1968
Ice shelves, ocean circulation beneath Antarctic ice shelves, 1905
Illinois, central Illinois cold air funnel outbreak, 2815
Indian Ocean
application of the GWR method to the tropical Indian Ocean, 470
summary of tropical cyclones for 1997, 3015
Inertia–gravity waves, digital filters as a weak constraint in 4DVAR assimilation, 2089
Initial state, North American NWP sensitivity to initial state uncertainty and upstream domains, 2005
Innovations, estimation of three-dimensional error covariances, 2126
Integral methods, comparison of integral methods for derivative estimation, 2538
Intensity, hurricane maximum intensity: past and present, 1704
Intraseasonal variability, adaptive filtering and prediction of intraseasonal oscillations, 802
Inversion
effects of trade wind inversion on Hawaiian airflow and cloud distributions, 1117
representing entrainment in boundary layer parameterizations of mixing, 1148
Isentropic coordinates, potential vorticity balance on an isentropic surface during winter, 1208
Isopycnal coordinates
density coordinate mixed layer models, 237
ocean circulation beneath Antarctic ice shelves, 1905
Israel, winter thunderstorms, 1259
Jacobians, computation of a solenoid as a ratio of areas, 345
Jets, analysis of a rear-inflow jet and deep convergence zone within a supercell, 2270
Juan de Fuca Straight, observations and simulations of a Pacific Northwest warm front, 978
Kalman filters
adaptive sampling with the ensemble transform Kalman filter, 420
distance-dependent filtering of background error covariance estimates, 2776
ensemble adjustment Kalman filter for data assimilation, 2884
ensemble smoother for error estimates, 709
practical method for nonlinear data assimilation, 1578
sequential ensemble Kalman filter for atmospheric data assimilation, 123
stochastic methods for sequential data assimilation with nonlinear systems, 1194
variance reduced ensemble Kalman filtering, 1718
Katabatic winds, mesoscale modeling over Greenland with MM5, 2290
Lake effects
diagnostic and sensitivity studies of a Great Salt Lake–effect snowstorm, 1318
Hurricane Huron: an example of extreme lake-aggregate effect in autumn, 401
multiscale analysis of the 7 Dec 1998 Great Salt Lake–effect snowstorm, 1296
Land surface
impact of land surface processes on the hydrologic cycle: 1993 flood event, 2833
implementation and sensitivity of MM5 coupled with a land surface model, 569
improved simulation of Florida summer convection, 1441
preliminary evaluation of MM5 coupled with an advanced land surface model, 587
Landfall
analysis of tropical cyclone landfall, 2073
diurnal variations in landfall times of tropical cyclones, 2627
Large-scale models, marine application of a moist PBL parameterization, 357
Large-scale systems, flow over northeast Brazil, 1673
Lateral boundaries, regional model study of synoptic features over West Africa, 1564
Lightning
1989–98 NLDN results for cloud-to-ground lightning in the United States, 1179
1995–99 cloud-to-ground lightning activity in the contiguous United States, 999
cloud-to-ground lightning in linear mesoscale convective systems, 1232
estimation of the intracloud–cloud-to-ground lightning ratio over the United States, 108
relationship between precipitation and lightning in the Iberian Peninsula, 2998
use of satellite and ground-based lightning measurements in forecasting, 1809
winter thunderstorms in Israel, 1259
Linear algebra, using a Lanczos eigensolver in computing empirical orthogonal functions, 1243
Linear inverse models, expected and actual errors, 1740
Linear MCSs, cloud-to-ground lightning in linear mesoscale convective systems, 1232
Lorentz equations
coupling neural networks to dynamical systems via variational assimilation, 818
practical method for nonlinear data assimilation, 1578
stochastic methods for sequential data assimilation with nonlinear systems, 1194
Low-level jets, interaction of the summer coastal jet with California topography, 530
Madden–Julian oscillation
modulation of tropical cyclones near Australia, 2970
monitoring and prediction of modes of coherent tropical variability, 2677
role of surface friction in the tropical intraseasonal oscillation, 896
Mammatus clouds, high-resolution airborne radar observations, 159
Marine boundary layer
dynamics of northwest summer winds over the Santa Barbara Channel, 1042
marine atmospheric boundary layer and clouds, 2040
structure of offshore flow, 1251
Marine meteorology, application of a moist PBL parameterization in large-scale models, 357
Maritime Continent, numerical simulation of the diurnal evolution of tropical island convection, 378
Maximum entropy method, adaptive filtering and prediction of intraseasonal oscillations, 802
Maximum potential intensity, hurricane maximum intensity: past and present, 1704

MC2 model
comparison of three cloud schemes in winter storm forecasts, 2923
mesoscale modeling study of the 1996 Saguenay flood, 1419
numerical study of a mesoscale convective system during TOGA COARE, 2501
Medium-range prediction, Southern Hemisphere skill compared for two medium-range operational models, 2377
Mesocyclones
evolution of low-level rotation in a Texas storm during VORTEX, 1339
synthetic dual-Doppler analysis of a winter mesoscale vortex, 312
WSR-88D documentation of a supercell with anticyclonic tornadoes, 2805
Mesoscale convective systems
convective outbreak, convective forcing, and cold convective pools, 2157
effect of time step in MM5 simulations, 502
mesoscale convective systems during the 1997–98 El Niño, 2443
numerical study of a mesoscale convective system during TOGA COARE, 2501
simulation of a progressive derecho using composite initial conditions, 1593
small-scale processes and scale interaction, 1779
surface cyclogenesis and amplification of mesoscale convective vortices, 605
synoptic-scale processes and scale interactions, 1757
use of adjoint method in forecasting, 1395
Mesoscale convective vortices, surface cyclogenesis and amplification of mesoscale convective vortices, 605
Mesoscale models
impact of horizontal resolution on numerical simulation of squall line, 2362
processes affecting evolution of a cold pool in the Columbia basin, 2600
Mesoscale processes, small-scale processes and scale interaction of a mesoscale convective system, 1779
Mesoscale systems
finescale structure of a mesoscale gravity wave, 218
origin and evolution of a mesoscale gravity wave, 198
Météo-France, digital filters as a weak constraint in 4DVAR assimilation, 2089
Meteosat, new cloud motion wind product, 2392
Mexico
analysis of tropical cyclone landfall, 2073
summary of the North Pacific hurricane season of 2000, 3004
Midrange forecasts, North American NWP sensitivity to initial state uncertainty, domains, 2005
Mixed layer models, density coordinate models, 237
Mixing, representing entrainment in boundary layer parameterizations, 1148
MM4 model, importance of anisotropic error distributions in data assimilation, 766
MM5 model
analysis of the 1998 ice storm, 2983
dynamic initialization of the marine boundary layer for short-range NWP, 275
effect of time step in MM5 simulations of mesoscale convective systems, 502
effects of vertical wind shear on the intensity and structure of hurricanes, 2249
evaluation of a short-range multimodel ensemble system, 729
evaluation of turbulent surface flux parameterizations over Antarctica, 26
Hurricane Huron: an example of extreme lake-aggregate effect in autumn, 401
marine atmospheric boundary layer and clouds, 2040
modeling of katabatic winds over Greenland, 2290
numerical simulation of the genesis of Hurricane Diana (1984), 1859
preliminary evaluation of MM5 coupled with an advanced land surface model, 587
simulation of a progressive derecho using composite initial conditions, 1593
simulation of the Hawaiian nocturnal flow regime, 1135
surface cyclogenesis and amplification of mesoscale convective vortices, 605
use of adjoint method in forecasting mesoscale convective systems, 1395
use of bogus vortices with four-dimensional variational data assimilation, 2023
Model initialization, dynamic initialization of the marine boundary layer for short-range NWP, 275
Monsoons, dynamical seasonal predictability of the Asian summer monsoon, 2226
Monte Carlo methods
ensemble adjustment Kalman filter for data assimilation, 2884
stochastic methods for sequential data assimilation with nonlinear systems, 1194
Morphology, rainfall morphology in Florida convergence zones: numerical study, 177
Mountain meteorology
numerical simulations of a gravity wave event over CCOPE, 909
simulation of the Hawaiian nocturnal flow regime, 1135
Movable meshes, simulation of tropical cyclones, 1370
Multigrid models
adaptive multigrid barotropic tropical cyclone track model, 138
multigrid method and flexible hybrid coordinate in a nonhydrostatic model, 2660
NAVDAS, formulation and diagnostics, 869
Navier–Stokes equations, application of the Newton–Krylov method to geophysical flows, 2404
NCAR Community Climate Model
comparing wavenumber truncation and horizontal diffusion in spectral models, 152
evaluation of turbulent surface flux parameterizations over Antarctica, 26
NCEP
alternative approach to nonhydrostatic modeling, 1164
evaluation of Eta Model boundary layer for air quality applications, 2761
sensitivity of NCEP Regional Spectral Model to domain size and nesting, 2904
Southern Hemisphere skill compared for two medium-range operational models, 2377
Near-surface temperature, mesoscale modeling of katabatic winds over Greenland with MM5, 2290
Nepal, modeling diurnal winds in the Himalayan Kali Gandaki Valley, 1062
Nested models
sensitivity of NCEP Regional Spectral Model to domain size and nesting, 2904
simulation of tropical cyclones with a movable mesh model, 1370
Neural networks, coupling neural networks to dynamical systems via variational assimilation, 818
Nocturnal regime
simulation of the Hawaiian nocturnal flow regime, 1135
z-less turbulence in and above the nocturnal boundary layer, 2136
NOGAPS model
estimation of error covariances for wind innovation vectors, 2939
estimation of three-dimensional error covariances, 2126
NAVDAS: formulation and diagnostics
Nonhydrostatic models
alternative approach, 1164
multigrid method and flexible hybrid coordinate in a nonhydrostatic model, 2660

Nonlinear dynamics
coupling neural networks to dynamical systems via variational assimilation, 818
identifying low-dimensional nonlinear behavior in atmospheric data, 2116
practical method for nonlinear data assimilation, 1578
Nonlinear models, numerical results from discontinuous nonlinear models, 2791
North America
summary of Atlantic hurricane season of 1998, 3085
summary of Atlantic hurricane season of 1999, 3057
summary of Atlantic hurricane season of 2000, 3037
North Atlantic
AMSU-A estimates of maximum sustained wind speeds in tropical cyclones, 1518
explosive cyclogenesis, 1481
numerical study of an extreme cold-air outbreak over the Labrador Sea, 47
sensitivity of cyclogenesis to sea surface temperature, 1273
summary of Atlantic hurricane season of 1998, 3085
summary of Atlantic hurricane season of 1999, 3057
summary of Atlantic hurricane season of 2000, 3037
North Atlantic oscillation, potential vorticity balance on an isentropic surface during winter, 1208
Northeast region, analysis of the 1998 ice storm, 2983
North Pacific
summary of hurricane season of 2000, 3004
synoptic climatology of surface cyclolysis, 748
tropical cyclone environments, 1928
North Pacific Experiment, dropsonde impact on analysis and 2–3-day forecast for landfalling storms, 1987
Nowcasting, tropical island convective storm evolution, 1637
Numerical methods
advection algorithm properties in variational data assimilation, 1221
application of the Newton–Krylov method to geophysical flows, 2404
discretization of the continuity equation in semi-Lagrangian models, 1746
exactly conservative semi-Lagrangian scheme on one dimension, 332
multigrid method and flexible hybrid coordinate in a nonhydrostatic model, 2660
quadratically conservative high-order advection schemes, 561
using a Lanczos eigensolver in computing empirical orthogonal functions, 1243
variance reduced ensemble Kalman filtering, 1718
Numerical weather prediction
alternative approach to nonhydrostatic modeling, 1164
North American sensitivity to initial state uncertainty, upstream domains, 2005
Objective analysis, ARM IOP data: method and sensitivity, 295
Observational studies
cloud-to-ground lightning in linear mesoscale convective systems, 1232
finescale structure of a mesoscale gravity wave, 218
observing system experiment with the West Coast picket fence, 2585
origin and evolution of a mesoscale gravity wave, 198
Observation system simulation, adaptive sampling with the ensemble transform Kalman filter, 420
Ocean models
application of the GWR method to the tropical Indian Ocean, 470
density coordinate mixed layer models, 237
ocean circulation beneath Antarctic ice shelves, 1905
tracer conservation with an explicit free surface method for ocean models, 1081
Offshore flow, structure, 1251
Oklahoma, multiscale structure and evolution of an Oklahoma snowstorm, 486
Oregon, supercritical flow within the Cape Blanco–Cape Mendocino terrain complex, 688
Orographic effects, numerical simulations of a gravity wave event over CCOPE, 909
Oscillations, role of surface friction in the tropical intraseasonal oscillation, 896
Outgoing longwave radiation, adaptive filtering and prediction of intraseasonal oscillations, 802
Pacific–North American oscillation, potential vorticity balance on an isentropic surface during winter, 1208
Pacific Northwest
intense landfalling cold front along the United States northwest coast, 934
processes affecting evolution of a cold pool in Columbia basin, 2600
Pacific Ocean
analysis of tropical cyclone landfall, 2073
land effect on the diurnal cycle of clouds over the TOGA COARE region, 1500
Parameter studies
effect of time step in MM5 simulations of mesoscale convective systems, 502
sensitivity of simulated supercell structure to environmental profiles, 664
Parcels, theory in three dimensions and calculation of SCAPE, 1656
Polar lows, numerical study of an extreme cold-air outbreak over the Labrador Sea, 47
Potential vorticity
balance on an isentropic surface during winter, 1208
case study of Rossby wave breaking along the subtropical tropopause, 2555
influence of diabatic heating on a heavy precipitation event, 2822
interaction between tropical cyclones and upper-tropospheric troughs, 2570
sensitivity testing of extratropical transitions case study, 1617
Precipitation
ability of a poor man's ensemble to predict precipitation, 2461
influence of diabatic heating on a heavy precipitation event, 2822
microphysics of the rapid development of heavy convective precipitation, 1882
multianalysis–multimodel superensemble forecasts of precipitation, 2861
rainfall variability over southern northeast Brazil, 2614
regional model study of synoptic features over West Africa, 1564
relationship between precipitation and lightning in the Iberian Peninsula, 2998
Precipitation anomalies, mesoscale convective systems during the 1997–98 El Niño, 2443
Preconditioning, application of the Newton–Krylov method to geophysical flows, 2404
Predictability
dynamical seasonal predictability of Asian summer monsoon, 2226
monitoring and prediction of modes of coherent tropical variability, 2677
Pressure, influence of pressure field on propagation of a supercell thunderstorm, 2695
Principal components
atmospheric response to early season Eurasian snow cover anomalies, 2746
Euclidean distance as a similarity metric for principal component analysis, 540
rainfall variability over southern northeast Brazil, 2614
Probabilistic forecasts, accuracy and economic value in forecasts of discrete events, 2329
Profilers, geopotential and temperature structure from profiler and rawinsonde winds, 1729
Quality, new cloud motion wind product from Meteosat, 2392

Quantitative precipitation forecasts
ability of a poor man's ensemble to predict precipitation, 2461
impact of horizontal resolution on numerical simulation of squall line, 2362
mesoscale modeling study of the 1996 Saguenay flood, 1419
over the United States by the ECMWF ensemble prediction system, 638
Radar observations
airborne radar observations of a warm front during FASTEX, 254
analysis of a rear-inflow jet and deep convergence zone within a supercell, 2270
evolution of low-level rotation in Texas storm during VORTEX, 1339
finescale structure of a mesoscale gravity wave, 218
high-resolution airborne radar observations of mammatus, 159
influence of pressure field on propagation of a supercell thunderstorm, 2695
multiscale structure and evolution of an Oklahoma snowstorm, 486
origin and evolution of a mesoscale gravity wave, 198
simulation of a convective storm initialized with bistatic Doppler radar, 1949
small-scale processes and scale interaction of a mesoscale convective system, 1779
synthetic dual-Doppler analysis of a winter mesoscale vortex, 312
winter thunderstorms in Israel, 1259
Rainbands, intense landfalling cold front along the United States northwest coast, 934
Rainfall
evolution of downslope flow under opposing trade winds in Hawaii, 956
rainfall morphology in Florida convergence zones: numerical study, 177
Rain/snow discrimination, multiscale structure and evolution of an Oklahoma snowstorm, 486
RAMS model
numerical study of a southeast Australian coastal ridging, 437
processes affecting evolution of a cold pool in the Columbia basin, 2600
sensitivity of coastally trapped disturbance dynamics to topography, 2955
Rank histograms, interpretation for verifying ensemble forecasts, 550
Ranking methods, objective ranking of synoptic-scale events, 2426
Rawinsondes
geopotential and temperature structure from profiler and rawinsonde winds, 1729
observing system experiment with the West Coast picket fence, 2585
Real-time analysis, monitoring and prediction of modes of coherent tropical variability, 2677
Reanalysis
South American cold surges, 1021
tropical cyclone environments over the North Pacific, 1928
Regional climate models
impact of tropical subseasonal SST variability on seasonal mean climate, 853
variable-resolution stretched-grid GCM for regional climate simulation, 453
Regional models
sensitivity of NCEP Regional Spectral Model to domain size and nesting, 2904
study of synoptic features over West Africa, 1564
Regional Spectral Model
evaluation of a short-range multimodel ensemble system, 729
sensitivity to domain size and nesting, 2904
Relative humidity, prognostic cloud fraction scheme, 1750
Residual delay maps, identifying low-dimensional nonlinear behavior in atmospheric data, 2116
Rossby waves
atmospheric response to early season Eurasian snow cover anomalies, 2746
case study of Rossby wave breaking along the subtropical tropopause, 2555
low-frequency modes of atmospheric variability, 2416
numerical study of a southeast Australian coastal ridging, 437
sensitivity of coastally trapped disturbance dynamics to topography, 2955
Roughness, structure of offshore flow, 1251
SAMEX project, objective verification of the ensemble forecasts, 73
Sampling, adaptive sampling with the ensemble transform Kalman filter, 420
Satellite observations
enhanced automated quality control for high-density satellite-derived winds, 517
estimation of the intracloud–cloud-to-ground lightning ratio over the United States, 108
impact of satellite winds on experimental GFDL hurricane model forecasts, 835
land effect on the diurnal cycle of clouds over the TOGA COARE region, 1500
new cloud motion wind product from Meteosat, 2392
SCAPE, parcel theory in three dimensions and calculation, 1656
Sea breezes
interactions between sea breezes and horizontal convective rolls, 2057
rainfall morphology in Florida convergence zones: a numerical study, 177
Sea ice, numerical study of an extreme cold-air outbreak over the Labrador Sea, 47
Sea–land breezes, nowcasting tropical island convective storm evolution, 1637
Seasonal forecasting, seasonal forecasting of tropical storms using coupled GCM integrations, 2521
Sea spray, effect of sea spray evaporation on tropical cyclone boundary layer, 2481
Sea surface temperature
correlation of U. S. tornadoes and Pacific sea surface temperatures, 884
expected and actual errors of linear inverse models, 1740
impact of tropical subseasonal SST variability on seasonal mean climate, 853
sensitivity of cyclogenesis to sea surface temperature, 1273
Semi-Lagrangian models
discretization of the continuity equation, 1746
exactly conservative semi-Lagrangian scheme on one dimension, 332
Sensitivity studies
MM5 model, 569
sensitivity of a GCM to low-level clouds over tropical landmasses and ocean, 2103
sensitivity of simulated supercell structure to environmental profiles, 664
sensitivity testing of extratropical transitions case study, 1617
Severe storms, case study of severe storm development, 2183
Shallow water equations
application of the Newton–Krylov method to geophysical flows, 2404
hurricane track prediction with a new barotropic model, 1834
spectral viscosity for shallow water equations in spherical geometry, 2346
Short-range prediction, dynamic initialization of the marine boundary layer for short-range NWP, 275
Simulation, simulating extratropical transition of tropical cyclones, 1462
Singular spectrum analysis, adaptive filtering and prediction of intraseasonal oscillations, 802
Singular value decomposition, Southern Hemisphere skill compared for two medium-range operational models, 2377
Smoothing, ensemble smoother for error estimates, 709
Snowpack, atmospheric response to early season Eurasian snow cover anomalies, 2746

Snowstorms
diagnostic and sensitivity studies of a Great Salt Lake–effect snowstorm, 1318
multiscale analysis of the 7 Dec 1998 Great Salt Lake–effect snowstorm, 1296
multiscale structure and evolution of an Oklahoma snowstorm, 486
Software, using a Lanczos eigensolver in computing empirical orthogonal functions, 1243
Solenoids
computation as a ratio of areas, 345
numerical simulations of a gravity wave event over CCOPE, 909
South America, cold surges, 1021
Southern Hemisphere
low-frequency modes of atmospheric variability, 2416
rainfall variability over southern northeast Brazil, 2614
skill compared for two medium-range operational models, 2377
summary of tropical cyclones for 1997, 3015
Spain, convective outbreak, convective forcing, and cold convective pools, 2157
Spatial derivative estimation, comparison of integral methods for derivative estimation, 2538
Spectral models, comparing wavenumber truncation and horizontal diffusion, 152
Squall lines
impact of horizontal resolution on numerical simulation, 2362
simulation of a progressive derecho using composite initial conditions, 1593
SSM/I
multianalysis–multimodel superensemble forecasts of precipitation, 2861
use of satellite and ground-based lightning measurements in forecasting, 1809
Statistics, Euclidean distance as a similarity metric for principal component analysis, 540
Storm environments, case study of severe storm development, 2183
STORM-FEST project
finescale structure of a mesoscale gravity wave, 218
origin and evolution of a mesoscale gravity wave, 198
water transport by thin moist layers in Project STORM soundings, 167
STORM project, water transport by thin moist layers in soundings, 167
STORM-WAVE project, water transport by thin moist layers in Project STORM soundings, 167
Stratiform clouds, marine application of a moist PBL parameterization in large-scale models, 357
Stratocumulus clouds, sensitivity of a GCM to low-level clouds over tropical landmasses and ocean, 2103
Streamfunction, low-frequency modes of atmospheric variability, 2416
Supercells
analysis of a rear-inflow jet and deep convergence zone within a supercell, 2270
influence of pressure field on propagation of a supercell thunderstorm, 2695
sensitivity of simulated supercell structure to environmental profiles, 664
WSR-88D documentation of a supercell with anticyclonic tornadoes, 2805
Supercell winds, wind structure in a supercell measured by a VHF wind profiler, 1968
Superensembles, multianalysis–multimodel superensemble forecasts of precipitation, 2861
Surface fluxes, evaluation of turbulent surface flux parameterizations over Antarctica, 26
Surface observations, hurricane environment, 1267
Surface temperature, diurnal cycle in the Tropics, 784
Synoptic features, regional model study of synoptic features over West Africa, 1564
Synoptic-scale events, objective ranking, 2426
Synoptic-scale processes, scale interactions of a mesoscale convective system, 1757
Synthetic dual-Doppler, analysis of a winter mesoscale vortex, 312
Taiwan, simulation of Typhoon Gladys (1994) and its interaction with local terrain, 1533
TAMEX project, thermodynamic structure of a subtropical quasi-stationary convective line, 1099
Tangent linear models, numerical results from discontinuous nonlinear models, 2791
Teleconnections
correlation of United States tornadoes and Pacific sea surface temperatures, 884
impact of tropical subseasonal SST variability on seasonal mean climate, 853
Temperature, geopotential and temperature structure from profiler and rawinsonde winds, 1729
Texas, evolution of low-level rotation in a storm during VORTEX, 1339
Thickness, South American cold surges, 1021
Thunderstorms
high-resolution airborne radar observations of mammatus, 159
understanding Hector: dynamics of island thunderstorms, 1550
winter thunderstorms in Israel, 1259
Time series
Euclidean distance as a similarity metric for principal component analysis, 540
identifying low-dimensional nonlinear behavior in atmospheric data, 2116
Time step, effect in MM5 simulations of mesoscale convective systems, 502
TOGA COARE
land effect on the diurnal cycle of clouds over the region, 1500
modeling convective cloud systems, 1689
numerical study of a mesoscale convective system, 2501
small-scale processes and scale interaction of a mesoscale convective system, 1779
synoptic-scale processes and scale interactions of a mesoscale convective system, 1757
Topography
nonclassical frontal gravity wave propagation adjacent to steep topography, 2633
sensitivity of coastally trapped disturbance dynamics to topography, 2955
simulation of Typhoon Gladys (1994) and its interaction with Taiwan terrain, 1533
Tornadoes
central Illinois cold-air funnel outbreak, 2815
correlation of U. S. tornadoes and Pacific sea surface temperatures, 884
WSR-88D documentation of a supercell with anticyclonic tornadoes, 2805
Tornadogenesis, evolution of low-level rotation in a Texas storm during VORTEX, 1339
Tracers, conservation with an explicit free surface method for ocean models, 1081
Track prediction
adaptive multigrid barotropic tropical cyclone track model, 138
hurricane track prediction with a new barotropic model, 1834
Trade winds
effects of trade wind inversion on Hawaiian airflow and cloud distributions, 1117
evolution of downslope flow under opposing trade winds in Hawaii, 956
Trajectories, reexamining the cold conveyer belt, 2205

Transport, water transport by thin moist layers in Project STORM soundings, 167
TRMM satellite
multianalysis–multimodel superensemble forecasts of precipitation, 2861
use of satellite and ground-based lightning measurements in forecasting, 1809
Tropics
diurnal cycle, 784
monitoring and prediction of modes of coherent tropical variability, 2677
Tropical cyclones
adaptive multigrid barotropic track model, 138
AMSU-A estimates of maximum sustained wind speeds, 1518
analysis of tropical cyclone landfall, 2073
diurnal variations in landfall times, 2627
effect of sea spray evaporation on tropical cyclone boundary layer, 2481
effects of vertical wind shear on the intensity and structure of hurricanes, 2249
hurricane maximum intensity: past and present, 1704
hurricane track prediction with a new barotropic model, 1834
impact of satellite winds on experimental GFDL hurricane model forecasts, 835
interaction between tropical cyclones and upper-tropospheric troughs, 2570
modulation of tropical cyclones by MJO near Australia, 2970
numerical simulation of the genesis of Hurricane Diana (1984), 1859
sensitivity testing of extratropical transitions case study, 1617
simulating extratropical transition of tropical cyclones, 1462
simulation of tropical cyclones with a movable mesh model, 1370
simulation of Typhoon Gladys (1994) and its interaction with Taiwan terrain, 1533
summary of Atlantic hurricane season of 1998, 3085
summary of Atlantic hurricane season of 1999, 3057
summary of Atlantic hurricane season of 2000, 3037
summary of North Pacific hurricane season of 2000, 3004
summary of West Pacific, North Indian Ocean, and Southern Hemisphere tropical cyclones for 1997, 3015
surface observations in the environment, 1267
tropical cyclone environments over the North Pacific, 1928
unbalanced dynamics in a numerical study of Hurricane Andrew, 92
Tropical depressions, summary of North Pacific hurricane season of 2000, 3004
Tropical islands
nowcasting tropical island convective storm evolution, 1637
numerical simulation of the diurnal evolution of tropical island convection, 378
understanding Hector: dynamics of island thunderstorms, 1550
Tropical meteorology, surface cyclogenesis and amplification of mesoscale convective vortices, 605
Tropical storms, seasonal forecasting using coupled GCM integrations, 2521
Tropopause, case study of Rossby wave breaking along the subtropical tropopause, 2555
Truncation, comparing wavenumber truncation and horizontal diffusion in spectral models, 152
Turbulence
development and application of a physical approach to estimating wind gusts, 5
representing entrainment in boundary layer parameterizations of mixing, 1148
structure of offshore flow, 1251
z-less turbulence in and above the nocturnal boundary layer, 2136
UKMO Unified Climate Model, evaluation of turbulent surface flux parameterizations over Antarctica, 26
United States
1989–98 NLDN results for cloud-to-ground lightning in the United States, 1179
1995–99 cloud-to-ground lightning activity in the contiguous United States, 999
diagnosis of an extratropical cyclone with a trough merger, 2310
diurnal variations in landfall times of tropical cyclones, 2627
estimation of the intracloud–cloud-to-ground lightning ratio over the United States, 108
impact of land surface processes on hydrologic cycle: 1993 flood event, 2833
objective ranking of synoptic-scale events, 2426
observing system experiment with the West Coast picket fence, 2585
QPF by the ECMWF ensemble prediction system, 638
variable-resolution stretched-grid GCM for regional climate simulation, 453
Upper troposphere
diagnosis of cyclolysis for two extratropical cyclones, 2714
interaction between tropical cyclones and upper-tropospheric troughs, 2570
Utah
diagnostic and sensitivity studies of a Great Salt Lake–effect snowstorm, 1318
multiscale analysis of the 7 Dec 1998 Great Salt Lake–effect snowstorm, 1296
Valley winds, modeling diurnal winds in the Himalayan Kali Gandaki Valley, 1062
Variable resolution, stretched-grid GCM for regional climate simulation, 453
Variational analysis
advection algorithm properties in variational data assimilation, 1221
coupling neural networks to dynamical systems via variational assimilation, 818
digital filters as a weak constraint in 4DVAR assimilation, 2089
NAVDAS: formulation and diagnostics, 869
use of bogus vortices with four-dimensional variational data assimilation, 2023
Vertical coordinates
alternative approach to nonhydrostatic modeling, 1164
discretization of the continuity equation in semi-Lagrangian models, 1746
tracer conservation with an explicit free surface method for ocean models, 1081
Vertical velocity, objective analysis of ARM IOP data: method and sensitivity, 295
Viscosity, spectral viscosity for shallow water equations in spherical geometry, 2346
VORTEX project
evolution of low-level rotation in a Texas storm, 1339
influence of pressure field on propagation of a supercell thunderstorm, 2695
Vortices
central Illinois cold air funnel outbreak, 2815
hurricane track prediction with a new barotropic model, 1834
large-scale flow over northeast Brazil, 1673
use of bogus vortices with four-dimensional variational data assimilation, 2023
Vorticity, hurricane maximum intensity: past and present, 1704
Walker circulation, sensitivity of a GCM to low-level clouds over tropical landmasses and ocean, 2103
Warm fronts
observations and simulations of a Pacific Northwest warm front, 978
reexamining the cold conveyer belt, 2205
Warm season, interaction of the summer coastal jet with California topography, 530

Water vapor, transport by thin moist layers in Project STORM soundings, 167
Wave-CISK, role of surface friction in the tropical intraseasonal oscillation, 896
Western Pacific Ocean, summary of tropical cyclones for 1997, 3015
Wind
  comparison of integral methods for derivative estimation, 2538
  enhanced automated quality control for high-density satellite-derived winds, 517
  estimation of error covariances for wind innovation vectors, 2939
  geopotential and temperature structure from profiler and rawinsonde winds, 1729
  impact of satellite winds on experimental GFDL hurricane model forecasts, 835
  new cloud motion wind product from Meteosat, 2392
Wind gusts, development and application of a physical approach to estimating wind gusts, 5
Wind profiler, wind structure in a supercell measured by a VHF wind profiler, 1968
Wind profiles, mesoscale modeling of katabatic winds over Greenland with MM5, 2290
Wind shear, effects of vertical wind shear on the intensity and structure of hurricanes, 2249
Wind speed, AMSU-A estimates of maximum sustained wind speeds in tropical cyclones, 1518
Windstorms, simulation of a progressive derecho using composite initial conditions, 1593
Winter storms
  analysis of the 1998 ice storm, 2983
  comparison of three cloud schemes in winter storm forecasts, 2923
  multiscale structure and evolution of an Oklahoma snowstorm, 486
  synthetic dual-Doppler analysis of a winter mesoscale vortex, 312
WISP project, nonclassical frontal gravity wave propagation adjacent to steep topography, 2633
WSR-88D, documentation of a supercell with anticyclonic tornadoes, 2805
